

Meet the Team

Meet

a Digital Forensics Specialist*

Our dedicated DFS is responsible for collecting complex data within specialised software to assist corruption investigations

What does your role at the Commission entail?

I acquire data from electronic devices in a forensically sound manner, and utilise specialist software to present electronic information in a format that can be efficiently reviewed by Commission staff. As we are a small organisation, I also assist colleagues with general ICT issues and questions, I administrate our case management system, and help manage the technical aspects of the Examination room equipment.

Why are you passionate about working at the Commission?

My role allows me to use my technical skills and knowledge to make a difference in my local community. I take great satisfaction in assisting my colleagues to understand the nuances of, and derive value from the large volumes of data that is gathered during the course of investigations.

What does your day-to-day look like?

One of the things I enjoy most about my role is that on any given day I can be doing a range of different tasks - acquiring data from devices, processing data gained, assisting Investigators with locating information in the data, providing subject matter expertise on a variety of subjects, testing equipment and software, and engaging with other Digital Forensics practitioners regarding all aspects of our "craft".

What are you most proud of working in your role?

Being able to support my colleagues in a variety of ways, ensuring the Commission is able to fulfil its mandate as efficiently and effectively as possible
